

Hydrant Flushing & Main Valve Exercising

The Town of Battleford Utility Department will begin its annual Hydrant Flushing and Main Valve exercising starting 2018-May-03 (weather permitting) and continue for approximately six (6) weeks.

This operation will take place

Monday to Friday During Regular Working Hours

Residents can expect discolored water during this time and loss of pressure. The discoloration and pressure will go back to normal as we move out from your area.

The following tips are provided to protect residents and businesses from discolored water and sediment produced by the flushing process. If these procedures are followed, there should not be any problems:

- ✓ Refrain from washing clothes until your water runs clear
- ✓ After the flushing is complete run the water from the tap closest to the water meter (outside tap ideal) for 10 minutes or until it runs clear
- ✓ Return to normal water usage

This operation allows an opportunity to check the function and operation of all the Fire Hydrants and Main Valves within the Town of Battleford to provide the best quality water year-round to our residents and businesses.

We appreciate your cooperation, and apologize for any inconvenience this may cause.

Thank you
